How Does It Work?

The **OptiCycle Air Purifier** pulls in surrounding air and passes it through its filters. The HEPA layer traps microscopic particles, while the carbon filter absorbs smells. The ionizer may help reduce airborne contaminants further.

However, it's important to understand that this device is best suited for small areas, not large rooms.

The Science of Easier Breathing
OptiCycle uses next-generation filtration to actively remove the airborne threats that most people never notice, leaving behind air that's simply lighter on. Feather rooms, easier breathing, and fewer irritations.
HEPA-H13 Filter
Traps 99.7% of dust, pollen, smoke, mold spores, and unsettle particles as small as 0.3 microns — the pollutants that most impact your sleep, breathing, and daily comfort.
360° Air Intake
Purifies the entire room evenly by pulling air from all sides, increasing speed, coverage, and overall effectiveness compared to front-only purifiers.
Activated Charcoal Filter
Neutralizes cooking odors, smoke, and chemical VOCs, leaving your space smelling clean and giving your home a refreshed, "just aired out" feeling.
Negative Ion Output
Helps neutralize bacteria and airborne pollutants by releasing cleansing ions, supporting cleaner, healthier air across your whole environment.
Ultra-Quiet Mode
Operates at near-silent noise levels so you can sleep, work, or relax while the OptiCycle Air Purifier hum, purified air in the background.
USB-C Powered
Works everywhere — at home, at work, in your car, or on the go. Plug into any power bank, or car adapter and keep the clean air wherever life takes you.
